

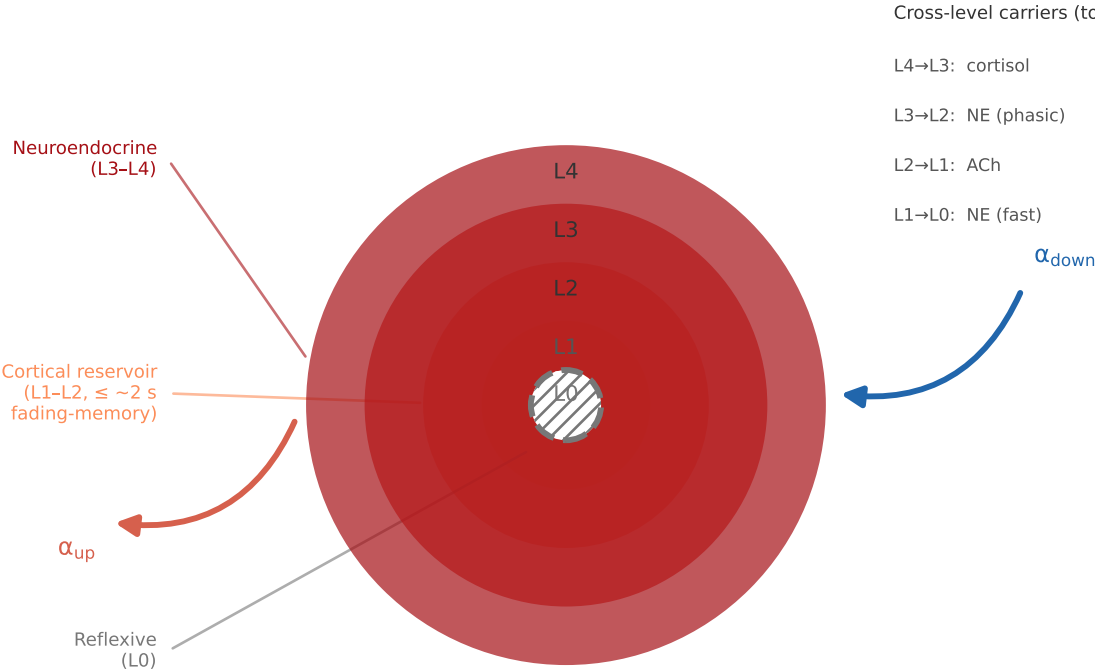

Figure 1 — Five-Level Russian Doll Hierarchical Architecture (§2.3)
Paper 3

Level parameters (summary)

Russian Doll concentric-ring hierarchy

L0 is sub-APGI (no $\Pi_0/\theta_0/\tau_{ign,0}$); supplies sensory drive to L1

Level	τ_{int}	Substrate	Neuromod.	APGI params
L4	months-years	Neuroendocrine / HPA	cortisol	$\Pi_4, \theta_4, \tau_{ign,4}$
L3	minutes-hours	Prefrontal-limbic	NE (phasic)	$\Pi_3, \theta_3, \tau_{ign,3}$
L2	seconds	Cortical reservoir	ACh	$\Pi_2, \theta_2, \tau_{ign,2}$
L1	200-500 ms	Cortical reservoir	NE (fast)	$\Pi_1, \theta_1, \tau_{ign,1}$
L0 (sub)	~ 10 -50 ms	Reflexive (spinal/brainstem)	—	no $\Pi/\theta/\tau_{ign}$

Full parameter values: see Table 1 (manuscript).
