

A

A — EP-5: TMS Targets
(lateral brain surface)

pIC stimulation → ↑ HEP/P3b (interoceptive precision gain)
dIPFC & PPC stimulation → ↓ global ignition (reduced high- γ spread)
Deeper substrates including thalamic and claustral contributions are not directly testable by transcranial stimulation; EP-5 constrains only the cortically accessible nodes of the gating network. (§5.3)

B

B — EP-6: iEEG Trial Timeline
(ρ_{res} estimation)
