

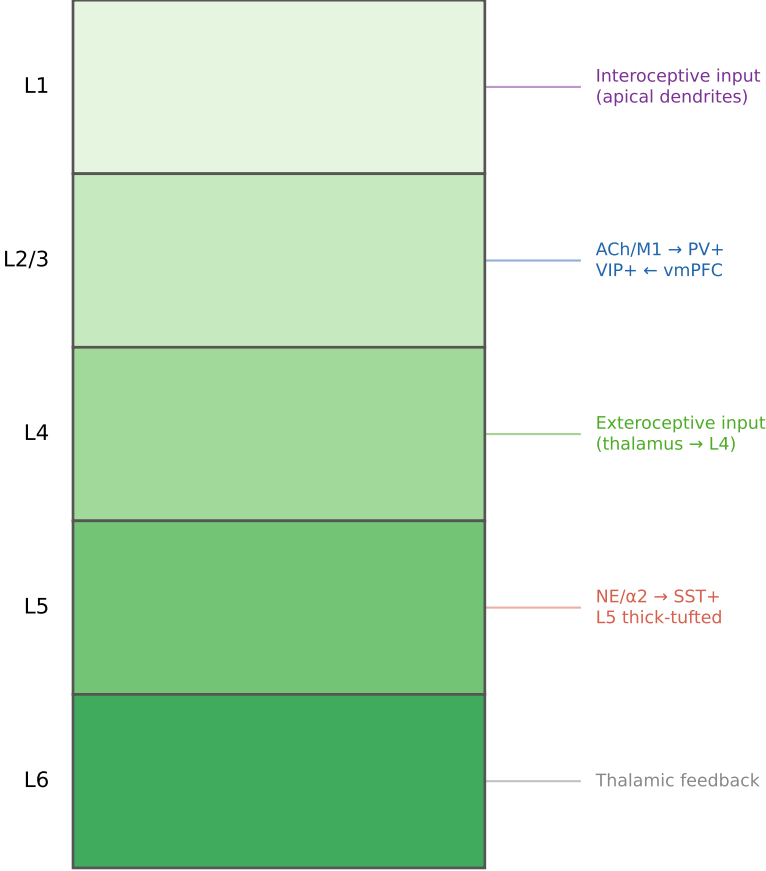

Figure 2 — Cortical Microcircuit: Precision Implementation and Somatic-Marker Pathway
(Paper 2, §3.1 and §3.3)

A

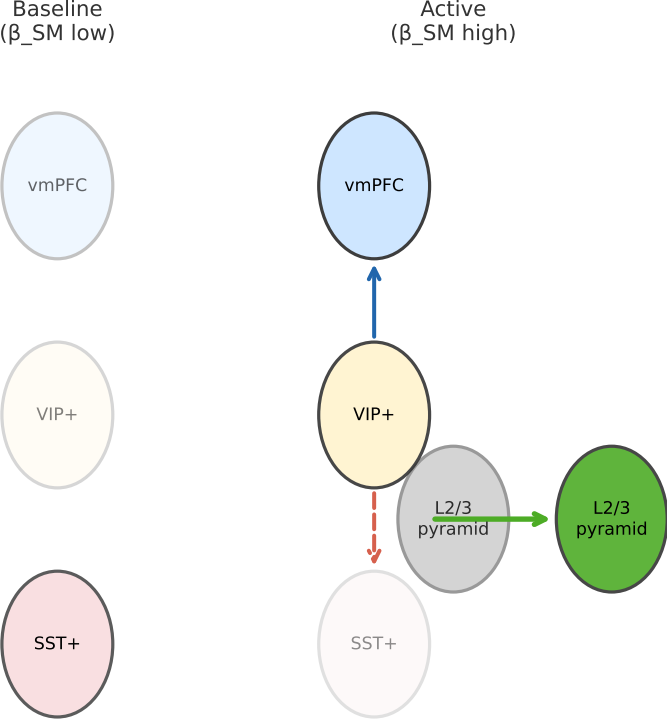

A — Laminar column
(receptor assignments)

Proposed circuit — causal dissociation requires
optogenetic/chemogenetic validation (§6.2, Gap 1)

B

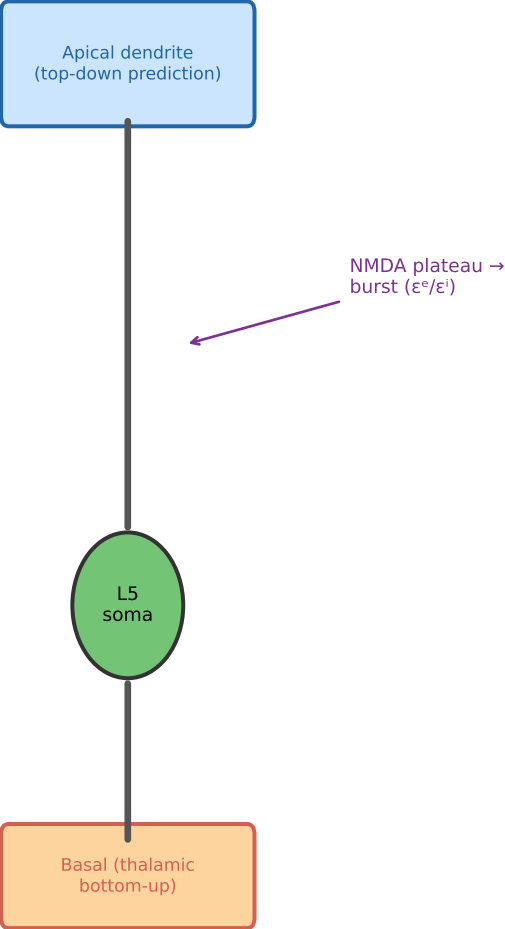

B — vmPFC→VIP+→SST+ disinhibition
(baseline vs. active)

$$\Pi_{\text{eff}}^i = \Pi_{\text{base}}^i \cdot \exp(\beta_{\text{SM}} \cdot M(c, a))$$

C

C — L5 pyramidal: apical/basal
mismatch → burst signal

Thalamic/claustal substrates not
transcranially accessible (§5.3)
